Tips for Consumers to Protect Against Fraud

Banks use a variety of safeguards to protect your information and prevent fraud, such as special fraud detection software, sophisticated computer security systems, employee training and strict privacy policies. As an account holder, you play a role in protecting your money and information, too. Here are some important tips for consumers.

How to Protect Your Identity and Accounts...

- Watch your account like a hawk. Monitor your account transactions online frequently. Set up electronic transaction notifications and balance alerts through your bank's online banking service to monitor activity. Check your statement every month.
- Notify your bank immediately if you notice a fraudulent transaction. You will be reimbursed for verified fraud
 if you report it promptly.
- Be alert for phishing scams trying to trick you out of giving up account numbers and other information. They
 often arrive as email, phone or text messages asking for your account number or other details. Banks and
 credit card companies already have that information and won't ask you for it in such unsolicited requests.
 Call your bank directly or navigate to their official website from a separate browser page if you're suspicious.
- Change your password regularly and avoid using a similar password for your bank accounts as you do for
 other websites or apps. Don't keep a list of passwords, PINS or usernames in your wallet or in an unsecure
 computer file.
- Be aware of your surroundings and equipment being used at ATMs and merchant swipe terminals to avoid skimming devices or other methods crooks use to steal your information.
- Don't give your Social Security number or other personal credit information about yourself to anyone who contacts you.
- Order copies of your credit report once a year to ensure accuracy.
- When using social networking sites, never include personal contact information including telephone numbers, Social Security number, birth date, email addresses, physical address, mother's maiden name or other information that could provide sensitive information to fraudsters or hints to passwords.
- Don't open email from unknown sources and use virus detection software.

Consumer tips for fraud protection, continued

What to Do if You're a Victim of Fraud...

- Contact your bank immediately if you know or suspect your account has been compromised or you identity
 has been stolen. Use the tools it has to help you.
- File a police report and contact the three major credit reporting companies. The fraud unit numbers are:
 - o TransUnion 800.680.7289
 - Experian 888.397.3742
 - o Equifax 800.525.6285
- Keep records of your communication with authorities, including names and contact numbers.
- For more advice, contact the FTC's ID Theft Consumer Response Center at 1-877-ID THEFT (1-877-438-4338) or www.ftc.gov/idtheft.

Background: Banks Act Swiftly to Protect Customers when Fraud is Detected or Suspected.

- Many banks have special fraud detection software that constantly monitors accounts to help flag ID theft.
- If a bank detects possible fraud or if it is contacted about potential fraud, it immediately takes action by
 closing accounts when appropriate and beginning an investigation. Depending on the data that is
 compromised, the bank may take a variety steps such as:
 - Enhanced account monitoring and customer notification
 - Blocking account access and re-issuing cards
 - Reimburse customers for confirmed fraudulent transactions.
- Due to the zero-liability fraud protection offered by most banks and credit card companies, most victims do not experience any out-of-pocket costs from fraudulent transactions.
- Banks bear the cost of account fraud, not consumers or merchants. Reimbursing customers and re-issuing
 cards can cost millions of dollars. For example, the Target data breach in late 2013 cost banks and credit
 unions \$200 million just to re-issue cards, according to data collected by the Consumer Bankers Association
 and Credit Union National Association. Many Georgia banks re-issued debit cards out of an abundance of
 caution. The cost estimate does not include reimbursement for actual fraudulent charges.
- Beyond the monetary cost, banks bear significant reputational risk if their account protection efforts, customer service and communication efforts about fraud are not excellent. Banks have become proactive and effective at dealing with these issues.
- Most banks have special toll free numbers and websites devoted to helping victims of identity theft.
- Many banks offer special worksheets, phone numbers and standardized affidavits to send to other businesses that may need to be contacted. A special affidavit is available from the Federal Trade Commission at www.ftc.gov/idtheft.
